

# Technical Training @ FLOWTECH

## Flowtech 's New Training Centre welcomes NFPC Partnership

To mark the opening of Flowtech's newly constructed Training Centre at Skelmersdale, Lancashire, the inaugural Training Programme was launched in May '10, as part of the newly formed partnership between Flowtech UK and The National Fluid Power Centre (NFPC).

*During these initial two day modules, Flowtech staff worked through basic theory and practical experimentation within specific areas including:*

- **Basic Principals of a Compressed Air System.**
- **General Layout of a Compressed Air System**
- **Compressors – Operating Principal and Selection**
- **Distribution System**
- **Cylinders and Valves**
- **Pneumatic Components and Symbols**
- **Practical Exercises, Creating Basic Pneumatic Circuits and Fault Finding Exercises.**

The new training programmes are primarily provided for Flowtech's staff to increase their technical knowledge and expertise in the Pneumatics and Hydraulics fields, but it is also planned that bespoke training modules will be rolled out to create an ongoing development programme for Flowtech's customer base.

Flowtech's objective for the Training Centre, is to provide customers with a level of service beyond their expectations, and to achieve this, it understands that its own technical and sales people require to be knowledgeable and technically astute to assist Customers with product and project enquiries.

The partnership with The National Fluid Power Centre will be the first of many initiatives Flowtech has planned to ensure Customers are supported by the best, technically skilled personnel in the industry.
